

TOMTRROW

District Crime Prediction & Tactical Fusion Platform

Global Intelligence, Local Prevention.
High-End Enterprise Predictive Policing Command Center.

When we predict tomorrow, we prevent crime today.

The Paradigm Shift

Moving from reactive 911 dispatch to preemptive deterrence.

The Mission

Ensuring operational resources are dispatched to the exact right places, at the exact right times.

The Result

Creating a visible, scientific layer of deterrence before the first emergency call is ever placed.

Why Traditional Heatmaps Fail

TRADITIONAL SYSTEMS

- Outdated Reports (Weekly Delays)
- Context Blindness
- Black-Box Dispatches
- Manual Voice Coordination

TOMORROW PLATFORM

- Real-Time 24hr Dynamic Scoring (RTM Active Layers)
- Automated OSINT Context Fusion (Telegram, X, Local Forums)
- Explainable AI (XAI) Transparency
- Proportional AVL & Mutual Aid Routing

Four Pillars Working in Absolute Synergy

Predictive Hotspot Grid

High-fidelity Gradient Boosting Machine (GBM) ML dividing sectors into ultra-precise 150m x 150m risk cells.

Multi-Source OSINT Fusion

Automated background crawler with NLP entity extraction, applying localized spatial boosts up to 600m.

Smart AVL Dispatch

Tracks active fleets, coordinating curvilinear Bezier routing and cross-station resource sharing.

Explainable AI (XAI)

Official, one-click printable patrol briefs breaking down the exact risk factors guiding field officers.

360-Degree Multi-Layered Data Fusion

LIVE SIGNALS

100/911 Call center integration, Cellular Triangulation & Anomaly Detection.

OSINT LAYER

Automated geolocation from Telegram, X, WhatsApp, Reddit.

CONTEXT VECTORS

Extreme weather indexing, Mass gathering event calendars (e.g., protests, soccer matches).

SEE: 91-4
LAT: 31.08 N
LON: 34.78 E

CRIMINAL DATABASES

LPR networks, National Vehicle registries (Stolen Cars), Parolee/Prisoner records.

Municipal Domain: Autonomous Tactical Response

Crime Trajectory Model

ML identifies serial movement patterns, forecasting the offender's next geographic target over time.

LPR Alert Feed

Real-time stolen vehicle alerts instantly cross-referenced with national databases and plotted on the tactical grid.

AI Dispatch Co-Pilot

Integrated LLM agent analyzes incoming incidents and instantly recommends optimal unit deployments based on predictive readiness.

Millisecond Threat Mitigation

Maximum Security Domain: Preempting the Inside Threat

Adapting the TOMORROW engine for the unique, volatile challenges of the Israeli Prison Service (IPS/Shabas). We move from perimeter reaction to internal preemption, managing inmate dynamics, guard shifts, and facility security through a unified AI lens.

Predictive Incarceration Analytics

Riot & Conflict Prediction

Social network analysis based on gang affiliations, historical incidents, and wing composition to detect rising tensions.

Computer Vision (CV) Oversight

Real-time camera feeds running NVIDIA Metropolis to automatically detect brawls, contraband smuggling, and irregular gatherings.

Escape Early-Warning

Combining internal geo-fencing, motion sensors, and cellular anomaly detection to trigger alarms before a breach occurs.

Absolute Facility Authority

Digital Prisoner Profile

Fused view of criminal history, internal social networks, and permitted communications (monitored via NLP).

One-Click Lockdown

Instant emergency protocol execution across targeted sectors or entire facilities.

Nachshon Unit GPS

Live ETA, availability, and routing of specialized intervention teams to specific facilities.

VR/AR Training

Simulating riots and mass-escape scenarios for advanced guard readiness and response timing.

Trusting the Machine: Explainable AI (XAI)

Black-box algorithms fail in law enforcement.
TOMORROW doesn't just issue commands;
it explains its logic.

The Preemptive Command Center

Scientifically Validated Deterrence

Model Validation Dashboard

Designed specifically for Mayors, Chiefs, and Procurement Officers.

Transparent Metrics

Real-time display of the ROC Curve Canvas and Confusion Matrix (True/False Positives).

The Ultimate Proof

A 30-Day Backtesting Simulator. Replay past dispatches against actual historical crime to scientifically prove the algorithm's hit-rate and exact ROI on prevention.

Enterprise-Grade Modular Architecture

Multi-factor Gradient Boosting Machine (GBM) / Logistic models with geographic coastline clamping.

Firebase Realtime DB, Edge AI, MTPROTO userbots, and secure REST APIs connecting directly to National Law Enforcement databases.

HTML5/CSS3 with glassmorphic filters, Leaflet JS mapping + CartoDB Dark Tiles.

TOMORROW'S SECURITY, TODAY'S STRATEGY.

**System: TOMORROW — Municipal Crime
Prediction & Tactical Fusion Platform**
